

## Covid 19 / Coronavirus Updates

We want to keep all of our patients up to date with what is happening with our practice during this virus emergency.

---

### What's happening now:

- The office is currently closed to patient visits.
  - We are still available by phone from 8 AM to 4 PM for prescription refills and to answer questions.
- 

### We still want to care for you and see you:

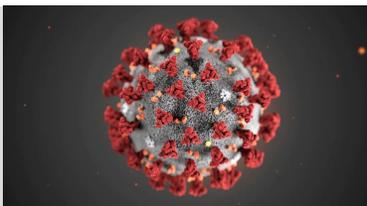

- We are doing video tele-health visits via a cell phone based app called Doximity, Zoom video, or using the tele-health in our web portal (Healow). Let us know which works best for you, and we can easily schedule your visit.
  - We need to continue to manage diabetes, high blood pressure, and other ongoing problems. We would, of course, prefer to see you in the office, but a lot can be accomplished via video visits.
  - We can do video visits for acute problems as well, such as respiratory infections, back pain, etc. (there are limitations since we cannot do an exam)
- 

### Our (Near) Future Plans

- We are hoping to resume seeing patients in the office by late May. That may change depending when state restrictions are relaxed.
  - Once we return to seeing patients in the office, you will see our staff wearing protective coverings, and we will ask our patients to wear a mask as well.
- 

### How to stay safe:

- Assume that every person you see, and every surface you touch (e.g. door handles) are infected with the virus.
- Wash your hands as soon as you return home from any errand.
- Wear a mask when you expect to be within 6 feet of others. This is more to protect others who are nearby. A mask is not needed if you are by yourself, or you are well distanced from others.

## Covid 19 Resources
